blockcoalition.org

Dear Web3 Enthusiast,

The U.S. Blockchain Coalition (USBC) is proud to present our comprehensive State of Web3 report, which represents a significant milestone in our collective journey as an industry. We extend our deepest gratitude to the countless people and organizations who have supported and enabled our progress thus far.

Our industry is filled with excitement, and also not free from criticism. I often find myself disheartened by the confusion stemming from misinterpreted terminology, prevalence of partial truths, and conflicting narratives lacking solid data. In 2021, Lee Bratcher, President of the Texas Blockchain Council, and I came together to create a multi-state coalition to unite the various stakeholders and foster clarity in this exciting industry – the U.S. Blockchain Coalition (USBC). Starting within the gracious auspices of Washington Technology Industry Association (WTIA), one of our key goals was to build bridges across different emerging technologies like blockchain and distributed ledger technology to industries that are best able to apply the technology. We leverage WTIA history, its perspectives, deep experiences, and strategies.

With this report, we strive to drive change and foster data-informed conversations and narratives. As such, we selected to work with our innovation research and analysis partner, Moonbeam, and we dedicated substantial time to documenting the definitions, frameworks, methodologies, and approaches that underpin this report. Our aim is to provide a comprehensive overview of the Web3 landscape, supported by robust datasets and rigorous analysis. While not complete, we have developed a baseline dataset from which the industry can build. With this report, we want policymakers to see the real opportunity for jobs in our communities. We want communities to see the economic impact that has been made to date and will be made in the future.

We invite you to utilize this report as a resource to develop data-driven strategies, identify areas requiring additional resources, and forge partnerships between incumbents, nonprofits, government bodies, and entrepreneurs.

This report serves as a foundation upon which we can collectively build a brighter future for the many industries shaped by Web3. Let us embark on this journey together, analyzing the landscape on a yearly basis to track our progress. Through collaboration and knowledge sharing, we can support one another and create a rising tide that lifts all boats.

Warm Regards,
Arry Yu

Web3 and Technology Industry Collaboration Underwritten by:

	The U.S. Blockchain Coalition (USBC) is a multistate federation comprised of state blockchain associations, organizations and influential individuals across the country cooperating to ensure the United States is a leader in blockchain, Web3, and distributed ledger technologies (DLT).
	The Washington Technology Industry Association (WTIA) is a coalition of like-minded innovators and problem solvers who believe in harnessing the transformative potential of technology and our collective strengths to build a better, brighter world for everyone.
	Coinbase (NASDAQ: COIN) believes The future of money is here. They operate a leading cryptocurrency exchange platform where people and businesses to buy, sell, and manage crypto.
	Block (NYSE: SQ) is a global technology company with a focus on financial services. Made up of Square, Cash App, Spiral, TIDAL, and TBD54566975, we build tools to help more people access the economy. TBD54566975 is building an open developer platform to make it easier to access Bitcoin and other blockchain technologies without having to go through an institution.
	The Texas Blockchain Council is focused on making Texas a leader in Bitcoin, Blockchain & Digital Asset Innovation.
	The Blockchain Advocacy Coalition leads blockchain policy in California. The coalition is comprised of working groups focused on bringing industry experts together to grapple with some of the most complex policy issues facing the Web3 ecosystem today, while identifying solutions and opportunities.
	The Alabama Blockchain Coalition believes that the future is here, and it has a name: Blockchain. They are focused on developing the distributed ledger technology economy in the state of Alabama.
	The Virginia Blockchain Council strives for a more informed and confident crypto community in the Commonwealth of Virginia through advocacy, hands-on education, and collaboration.
	The Provenance Chain Network aims to be the system of evidence supporting company claims and revealing product lifecycle stories. The Provenance Chain™ Network offers a breakthrough, multi-industry transparency solution that embraces open standards and uses a unique system of requirements, incentives, claims and evidence to bring significant benefit to brand owners, consumers, regulators, retailers, and the economy.

This report was produced through a partnership across the Web3 industry including:

The State of Web3: A state-by-state analysis of the Web3 economic activity in the U.S. (US-2023)

Table of Contents

This report provides an assessment of the economic activity, impact, and innovation potential of Web3 technology across the 50 U.S. States, the District of Colombia, and Puerto Rico (50+2).

Section	Page
Executive Summary	<u>5-14</u>
Web3 Activity - State by State	<u>15-87</u>
Northeast	<u>17-38</u>
Southeast	<u>39-49</u>
South	<u>50-56</u>
Midwest	<u>57-65</u>
Great Plains	<u>66-76</u>
West	<u>77-87</u>
National Trends in Web3	<u>88-96</u>
Research Methodology & Terms	<u>97-106</u>

The State of Web3

Executive Summary

This report reviewed state by state data, finding several Web3 outliers including Florida, Nevada, and Tennessee.

Most Active

High activity, few international investors

Significant government investment (but not much else)

Unexpectedly high per-capita investment

Notable single industry players

These standout states are examined in further detail in their respective regions for job activity & federal funding.

Despite the declining hype of digital assets in recent years, enterprise Web3 applications are driving real economic activity.

By the Numbers:

- 5,700+ Startups
- 10,000+ Investors
- 5,000+ Deals
- \$42B+ VC
- \$38B+ M&A
- \$19B+ PE
- \$4B+ IPO

Source: Moonbeam Exchange's data science platform which includes 100+ data feeds including Crunchbase and Pitchbook. Date Range: 2008-2022

Capital Invested by Year

The Bottom Line:

The digital asset hype, as represented by venture capital investment, started in 2014 and peaked in 2021, with a significant drop in 2022 and 2023. However, since 2016 there has been steady growth in investment in enterprise applications of Web3 technologies until recent booms in 2021 and 2022.

Web3 accounts for 7% of all US Unicorns since 2000.

MOONBEAM

Enterprise applications of Web3 continue to gain traction through cybersecurity, smart contracts, and supply chain applications.

Web3 Startups Founded per Year

In recent years, an average of 400+ Web3 startups formed per year, with peak activity in 2017 (932), 2018 (898), and 2021 (798).

Some promising enterprise applications of Web3 technology include:

Smart Contracts – Blockchain enables secure and automated smart contracts, enhancing transactions with transparency, efficiency, and trust across various industries.

Supply Chains – Blockchain streamlines supply chains, ensuring transparency, traceability, and efficiency while reducing fraud and errors.

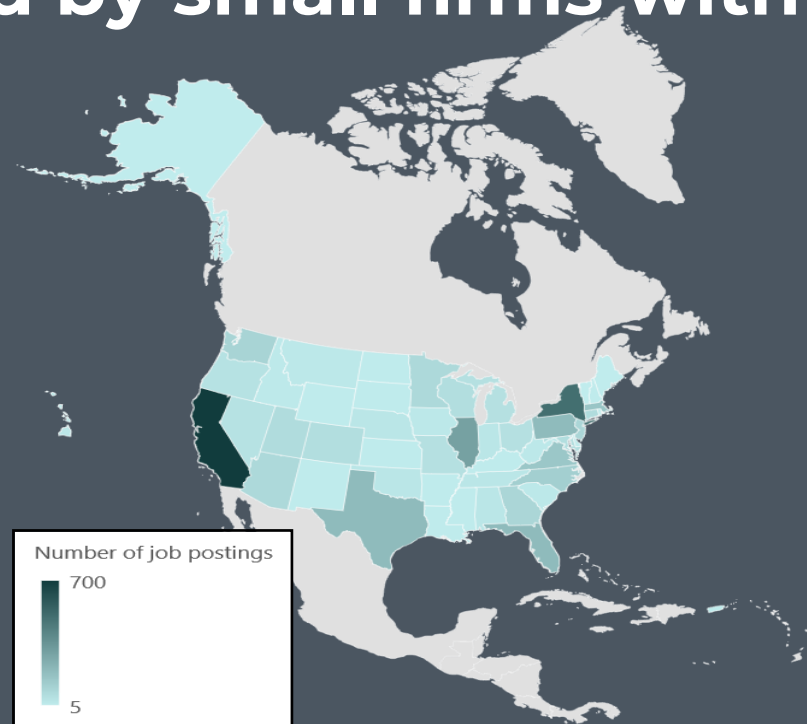

- **Agriculture** – Blockchain tracks agricultural products, verifying origin, quality, and certifications, fostering trust and fair trade.
- **Pharmaceutical** – Blockchain enables tracking of pharmaceuticals, ensuring authenticity, preventing counterfeit drugs, and enhancing drug safety.
- **Consumer Goods** – Blockchain ensures transparency in CPG supply chains, from manufacturing to retail, promoting ethical sourcing and product authenticity.
- **Security** – Blockchain fortifies security & defense operations, enhancing supply chain integrity, secure communication, and tamper-resistant records.

Health – Web3 technology empowers secure health records management, enabling patient control, interoperability, and privacy-enhancing features for improved healthcare outcomes.

Cybersecurity – Web3 technology strengthens cybersecurity defenses with decentralized threat detection, secure data handling, and resilient cryptographic mechanisms.

Web3 companies account for hundreds of thousands of jobs nationwide, led by small firms with under 50 employees.

Select incumbents hiring for Web3-related positions

The Bottom Line:

Job numbers are exceedingly error prone, with no reporting standards, fluctuations in business performance, and changing job descriptions. Despite the lack of normalized data, Moonbeam estimates 200,000+ jobs nationally based on startup activity, investments, and incumbent activity.

Web3 Companies by Employee Count

29% of all investors actively investing in US-based Web3 companies are foreign.

Location of Web3 Investors

■ U.S. Investors ■ Foreign

- Top 5 states in terms of total capital invested (CA, NY, TX, FL, NJ) have on average 30.3% international investors.
- Other states that excel at international investment attraction: NE (50%), WY (45.5%), NC (43.8%), CT (38.6%), and MD (38.6%).

Where are these international investors based?

UK (5.19%) | China (5.08%) | South Korea (2.25%) | Brazil (2.15%) | Japan (1.4%) | Switzerland (1.4%) | Singapore (1.23%) | France (1.17%) | Canada (1.03%)

Bottom Line:

With the inherently global nature of Web3 technology, international investment is critical to a successful innovation economy. Smaller states, despite having notable companies, fare worse at attracting international investment.

California and New York lead as expected, Florida and Texas emerge as Web3 leaders compared overall startup activity.

Count of startups, by state

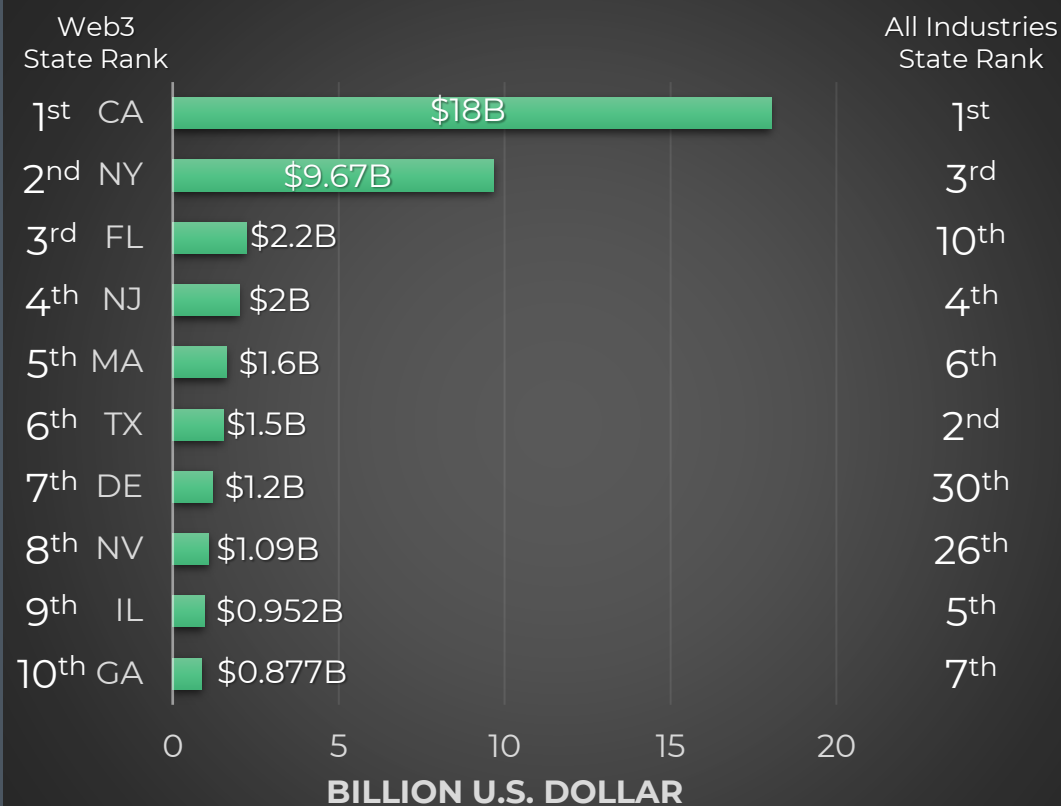

Note: these are total Web3 **startups** by state. The data has not been normalized per capita.

The Bottom Line:

While startup hubs like California and New York perform well as expected (based on total startup activity), Web3 activity shows emerging leadership from states like Delaware and Georgia.

Notably, certain states with mid-level startup activity in general over perform in the Web3 economy, e.g. Nevada and Delaware from VC funding rankings of 30th and 26th respectively to Web3 rankings of 7th and 8th.

Billions \$USD invested by VC, by state

BILLION U.S. DOLLAR

Incumbent involvement is growing, with 276 of the Fortune 1000 companies developing solutions and 123 making investments.

Nationwide, out of a 1000 incumbents, only 27.6% are developing/implementing Web3, while only 12.3% are actively investing in Web3.

Certain sectors, like Financials, Technology, Retail, Media, and Health Care, seem to be the most active in this sector.

Notable investments of incumbents:

- **JP Morgan Chase** (sector: Financial) - \$268M in digital asset company, blockchain companies, and distributed ledger software companies.
- **Fox** (sector: Media) – \$100M in blockchain network for storage, distribution, and monetization of digital content.
- **Cigna** (sector: Health Care) – joint venture between Aetna, Anthem, Cigna, Cleveland Clinic, Health Care Service Corporation, and IBM to form [Avaneer Health](#).
- **Overstock.com** (sector: Retail) – \$93M in blockchain-based digital asset system, blockchain-based equity trading platform, decentralized transaction platform, among others.

Incumbents Developing/Implementing or Investing in Web3 technology, by sector.

U.S. Government funding remains low but shows significant growth since 2017 with a CAGR of 35.7%.

The Bottom Line:

Government funding is a growing area of non-dilutive investment for Web3 startups focused on enterprise applications.

Government Funding includes contracts, grants and SBIR/STTRs

Top departments funding Web3 R&D:

- NSF (\$58.4M),
- DoD (\$52.5M)
- Dept. Energy (\$21.9M)

For full details see slide 93.

Federal funding over time, by type of funding

Federal funding over time, by focus area

Summary of Methodology

For a complete review of the methodology and definition of terms, see pages 98-105

The State of Web3: A state-by-state analysis of the Web3 economic activity in the U.S. (US-2023)

MOONBEAM

©2023 U.S. Blockchain Coalition. All rights reserved. This report, including its content, design, and intellectual property, is protected by copyright laws. No part of this report may be reproduced, distributed, or transmitted in any form or by any means, without the prior permission except in the case of brief quotations embodied in critical reviews and certain other non-commercial uses permitted by copyright law. For permissions and inquiries, please contact Arry Yu (arry@blockcoalition.org).

Methodology Overview

The report aims to identify the strengths and opportunities of each state’s Web3 ecosystem across five dimensions. The report also seeks to highlight best practices and opportunities for collaboration within and across states to foster a thriving Web3 ecosystem that can drive economic growth, create jobs, and improve the lives of citizens.

Ultimately, the goal of the report is to provide policymakers, investors, entrepreneurs, and researchers with actionable insights that can inform their decisions and contribute to the continued development and adoption of Web3 in the United States.

Moonbeam analyzed economic activity across five primary dimensions:

1. Startup activity;
2. Incumbent activity;
3. Investor activity;
4. University research;
5. Government funding.

A complete description of the methodology and terms used can be found in the Methodology Section of this report.

Ecosystem Benchmarking Method

This methodology was informed by:

- Daniel Isenberg’s “Domains of the Entrepreneurship Ecosystem” model ([link](#));
- “Innovation Ecosystems” by Thomas & Autio ([link](#));
- MIT Sloan Heat Map (Strategically Engaging with Innovation Ecosystems) ([link](#)).

After data was collected, cleaned, and normalized, each feature was ranked individually, and all features within a category were averaged to get a single value between 0 (low) and 10 (high). Moonbeam derived a median of all values within a category to generate an average state, to which all states were compared.

A minimum value of 0.2 (instead of zero) was given to the lowest rank, to account for other sources of data not evaluated in this report (e.g. other incumbents outside the Fortune1000 list, government policies, masters and specific courses focusing on blockchain in Academia).

Web3 Defined (full definitions in Methodology Section)

To support this analysis, we targeted several key technology areas related to the advancement of the Web3 technologies and industry. Moonbeam built a term adjacency map to connected concepts centralizing around:

- | | | | |
|--|---|---------------------------|-----------------|
| • Blockchain | • Decentralized Finance/ deFi | • Management | • Token |
| • Distributed Ledger | • Decentralized Autonomous Organization | • Verifiable Credentials | • Tokenomics |
| • Web3 | • Cryptocurrency / Bitcoin | • Decentralized Identity | • Tokenmetrics |
| • NFT/NFT Technology/Non-Fungible Tokens | • Digital Asset/Digital Asset | • Stablecoins | • Crypto Assets |
| | | • Self-Sovereign Identity | |

While this report focused on five primary dimensions, additional analysis would provide a further insight.

The scope of this report

This report focused on developing a baseline of activity data comparable across the 50+2 jurisdictions with metrics that could be uniformly quantified with complete datasets. Some metrics were not included due to constraints in data and scope.

Activity Type	Covered	Not Covered
Startup	<ul style="list-style-type: none">Startup formation and self-reported hiringDisclosed investments (Pitchbook or Crunchbase)	<ul style="list-style-type: none">Startup closures, layoffs, or bankruptcyCorporate relocations to other states or countries
Investment	<ul style="list-style-type: none">Disclosed venture capital investments	<ul style="list-style-type: none">Undisclosed investments
Incumbent	<ul style="list-style-type: none">Publicly disclosed initiatives of the U.S. based Fortune 1000 companies.Job postings between Jan-April 2023.	<ul style="list-style-type: none">Non-U.S.-based companies.Non-Fortune 1000 companiesIncumbent jobs
Academic	<ul style="list-style-type: none">Government funded research grantsMajor research university labs and publications	<ul style="list-style-type: none">Specific academics and their citations.Creation of new majors or rate of graduation
Government	<ul style="list-style-type: none">Government contracts (FAR and OTA)Government grants (standard, SBIR, STTR)	<ul style="list-style-type: none">Classified spending; State spendingRegulatory activity and its impactComparable with international governments.

Areas for further exploration

Accounting for sector downturns (jobs & failed startups)

Influences of Public Policy and Regulation

Global Migration of jobs/companies

Academic/Commercialization Pipeline

U.S. ranking compared globally

Washington

The Northeast

- [Connecticut](#) has large financial incumbents and notable Web3-related venture capital activity.
- [Delaware](#) is home to several startups – many of which are only incorporated there.
- [District of Columbia](#) is very well rounded and well positioned with a primary focus in the government sector.
- [Maine](#) has limited Web3-related activity.
- [Maryland](#) is leading in the commercialization of government investment in Web3.
- [Massachusetts](#) excels at attracting government R&D funding and is notably pioneering Web3 in the life sciences / biotech sector.
- [New Hampshire](#), despite a nascent Web3 ecosystem, is known as a jurisdiction friendly with international trust laws and family wealth funds.
- [New Jersey](#) is an active state for Web3, with 100+ startups, 4 exits, and notable pharma incumbent investment.
- [New York](#) leads corporate investment in Web3 with notable activity in the finance, insurance, and tech sectors.
- [Pennsylvania](#) demonstrates high efficiency with nearly 9% of their startups achieving an exit to date.
- [Puerto Rico](#) has very few startups in the territory. However, seventy-five percent have received at least angel investment.
- [Rhode Island](#), for a small state, has several incumbents implementing Web3 and is attracting federal R&D.
- [Vermont](#) is working to build a digital ecosystem in Windsor County.
- [Virginia](#) has large government contractors that are investing in Web3 applications. Also, there are notable Web3 cybersecurity startups.
- [West Virginia](#) has limited Web3 activity.

For states that have more activity, additional detail on hiring and federal activity has been added on a second page.

Connecticut

The state has large financial incumbents and notable Web3-related venture capital activity.

blockcoalition.org

Ecosystem

Investment

20 cos. with **\$183M+** in Web3 investments. Top VC recipients:

- [One River Asset Management](#) (founded: 2013), based in Greenwich, raised \$56M and was acquired by Coinbase in 2023.
- [ParaFi Capital](#) (2018), based in Greenwich, raised \$30M.
- [Oasis Pro Markets](#) (2019), based in Darien, raised \$27M.
- [Hyperlane](#) (2022), based in Greenwich, raised \$18.5M.
- Note: [Digital Currency Group](#) (2011), based in Stamford, has made 200+ Web3 investments – DCG completed a \$2B leveraged recapitalization led by Genesis Global Trading.

- **New Haven Metro Area** is the center of investment activity, potentially being influenced by the proximity of NY Metro Area.

Startups

- **50 startups** out of 54 companies (93%)
- 1 company received \$100M+
- 38% of companies received at least 1 round of funding.
- 2 company had an IPO and 3 were acquired.

Company Distribution by Category

Incumbents

24 Fortune 1000 companies headquartered, of which **5 companies** have significant Web3 investment or are implementing/developing Web3 technology:

Government/Academia

Focus Areas:

- Secure frameworks that promote scalability and efficiency of blockchain-based resource markets, but generic enough to be used for any service type.
- Define security goals for Public Key Infrastructure (PKI) schemes, present PKI schemes which probably meet these goals, and present practical and efficient implementations of PKI schemes. PKI provides a critical security infrastructure to mobile networks, IoTs, and Blockchains.

Funding Agencies: National Science Foundation

Active Universities: University of Connecticut, Yale University, Quinnipiac University, Trinity College, Sacred Heart University

Federal Funding: \$1.5M in Grants

Additional Activity

- 81%+ companies have 1-50 employees.
- 70 job postings from several companies: Recruiting from Scratch, Deloitte, Grayscale Investments, CyberCodes, CoinDesk, Coinbase, Interactive Brokers, among others. Some of the positions available are for blockchain engineer, blockchain and digital assets manager, head of product management, FinTech/Blockchain counsel.
- Salary range: \$50K-\$150K.

Company Distribution by Year Founded

Delaware

As in other sectors, the First State is home to several startups – many of which are only incorporated there.

The State of Web3: A state-by-state analysis of the Web3 economic activity in the U.S. (US-2023)

MOONBEAM

Ecosystem

Investment

- 125 cos. with **\$2.2B+** in Web3 investments.
- Top VC recipients:
- [LootMogul](#) (founded: 2020) raised \$211M.
 - [RECUP](#) (2021) raised \$54.85M.
 - [PrimeLab](#) (2021) raised \$53M.
 - [Palm NFT](#) (2021) raised \$36.9M.
- **Wilmington Metro Area** is the center of investment activity.

Startups

- **188 startups** out of 210 companies.
- 1 company received \$100M+
- 46%+ of startups received at least 1 round of funding.
- 5 companies were acquired.

Incumbents

8 Fortune 1000 companies headquartered, of which **1 company** have significant Web3 investment or are implementing/developing Web3 technology:

Implementing/Developing

Government/Academia

- Focus Areas:**
- Contract for consulting services and web subscriptions
- Funding Agencies:** Department of Treasury
- Active Universities:** University of Delaware, Widener University, Delaware State University
- Top Recipients:** Blockchain Analytics and Tax Software
- Federal Funding:** \$760K in Contracts

Additional Activity

- 81% of the companies have 1-50 employees.
- Less than 10 job postings currently open, most from Facephi, AIStrata Technology Solutions, Armstrong Teasdale, and Deloitte, for software developer of blockchain technologies, patent agent, and representative sales manager.
- Salaries range: \$50K-\$100K.

District of Columbia

DC is well rounded and well positioned with a primary focus in the government sector.

The State of Web3: A state-by-state analysis of the Web3 economic activity in the U.S. (US-2023)

MOONBEAM

Ecosystem

Investment

24 cos. with **\$16M+** in Web3 investments.

Top VC recipients:

- [Inca Digital](#) (2017) raised \$5.45M.
- [Layer3](#) (2021) raised \$2.5M.
- [IndyGeneUS AI](#) (2020) raised \$2M.
- [Darkblock](#) (2021) raised \$1.7M.
- Gladius.io (founded: 2017) has an [unregistered Initial Coin Offering](#) of \$20K in 2017 and is [out of business](#) since 2019.

Startups

- **58 startups** out of 69 companies.
- 41%+ of startups received at least 1 round of funding.

Company Distribution by Category

Incumbents

5 Fortune 1000 companies headquartered, of which **2 companies** have significant Web3 investment or are implementing/developing Web3 technology:

Implementing/Developing

Investing

THE CARLYLE GROUP

Government/Academia

Focus Areas:

- Blockchain and cryptocurrency analysis
- Develop a framework to identify and solve systemic health & well-being challenges
- Develop of a Distributed Ledger System to Track Environmental Sustainability
- Smart Contracts for Publicly Available Information Collection Management

Funding Agencies: Department of Homeland Security, National Science Foundation, Department of State, Department of Defense, Securities and Exchange Commission

Active Universities: Georgetown University, George Washington University

Top Recipients: Oasys International, New America Foundation, Nakamoto Terminal, Map-Collective, EpochGeo

Federal Funding: \$600K in Contracts, \$1.45M in Grants and \$1.77M in SBIR/STTRs

Additional Activity

- 78% of the companies have 1-50 employees.
- +100 job postings currently open, most from IBM, Circle, Chainalysis, Blockchain Association, SIMBA Chain, and Coinbase, among others. Most positions are for blockchain marketing, blockchain engineer, crypto cybersecurity analysts, government relations & regulatory strategy, blockchain security researcher, among others.
- Salary range: \$80K-\$200K.

Company Distribution by Year Founded

We analyzed open job postings in the state to determine employers, roles, and salary ranges. This data is as of April 2023.

DLT Hiring

Ecosystem

Investment

- Don't Panic Cloud (founded: 2016) raised \$1.2M but is out of business since 2022.
- EXOCHAIN (2017) raised \$0.3M but is out of business since 2019.

Startups

- **12 startups** out of 12 companies.
- 16.7% of companies received at least 1 round of funding.

Incumbents

2 Fortune 1000 companies headquartered, of which none has an history of investing or developing Web3 technology.

Government/Academia

- Focus Areas:**
- Use autonomous distributed edge intelligence software providing grid optimizations, integration with fractally distributed ledger-based cryptocurrency system, to address the effective distributions of electrical power.
 - Integration and development of blockchain for asset and material tracking to enhance circular economy.

Funding Agencies: Department of Energy and National Science Foundation

Active Universities: University of Southern Maine, University of Maine System, Bowdoin College, University of Maine at Farmington

Top Recipients: Introspective Systems

Federal Funding: \$5.7K in Grants and \$150K in SBIR/STTRs

Additional Activity

- All the companies identified have less than 50 employees.
- Less than 5 job postings were found, only for remote positions. Of note, Rarible is looking for a senior backend engineer for an estimated yearly salary of \$110K-\$114k.

Maryland

The state is leading in the commercialization of government investment in Web3.

The State of Web3: A state-by-state analysis of the Web3 economic activity in the U.S. (US-2023)

blockcoalition.org

Ecosystem

Investment

West Virginia has a limited startup economy and, as such, garners little attention from investors. With the rise of remote work, there is some activity from the DC-metro area, but not specific to Web3.

To date, there have been no publicly disclosed venture capital investments in Web3 technologies or applications from West Virginia based startups.

Startups

- 1 company ([FreedomTrust](#)) founded on 2020, HQ'ed in **Morgantown** city, was the [first firm approved through West Virginia fintech sandbox](#).

Incumbents

West Virginia has zero Fortune 1000 companies based in the state.

Government/Academia

No government activity through Contracts, SBIR/STTRs or Grants.

Active Universities: Marshall University in Huntington

Additional Activity

- Less than 20 job postings currently from several companies: Deloitte, IBM, Noblis, and Gigster. Most are remote positions for blockchain and software developer, summer intern, solution architect, blockchain & digital asset manager, procurement professional/ specialist.
- Salary range: \$40K-\$180K.

The Southeast

- [Alabama](#) hosts government agencies and startups experimenting with IoT and logistics applications.
- [Miami Florida](#) has been developing as a Web3 hub, helping propel the state to the top 5 most active Web3 ecosystems.
- [Georgia](#) as a state has a Web3 economy with diverse incumbents and growing startup investments.
- [Kentucky](#) universities have excelled at attracting government investment.
- [Mississippi](#) has limited Web3 activity.
- [North Carolina](#) has a strong university activity and government spent, which are supporting Web3 economy growth.
- [South Carolina](#) has a foothold emerging in government.
- [Tennessee](#) is an epicenter for healthcare technology.

For states that have more activity, additional detail on hiring and federal activity has been added on a second page.

Alabama

The state hosts government agencies and startups experimenting with IoT and logistics applications.

Ecosystem

Investment

- 2 cos. with **\$3M+** in Web3 investments.
- Top VC recipients:
- [Hijro](#) (founded: 2014) raised \$2.69M. Out of business since 2021.
 - [QBRICS](#) (2017) raised \$0.30M.
 - Most companies are based in Canada, Lexington and Georgetown.

Startups

- **25 startups** out of 60 companies.
- 1 company received \$100M+
- 46%+ of startups received at least 1 round of funding.

Incumbents

6 Fortune 1000 companies headquartered, of which **2 companies** have significant Web3 investment or are implementing/developing Web3 technology:

Implementing/Developing

Government/Academia

- Focus Areas:**
- Blockchain cryptography for vehicle control systems
 - An auditable blockchain for Smart Grid
 - Target custody cross-domain blockchain-based data sharing framework
 - Logistics machinery prognostics and blockchain-enabled data exchanging
- Funding Agencies:** Department of Defense, Department of Energy, National Science Foundation
- Active Universities:** University of Kentucky, University of Louisville, Bowling Green State University, Murray State University, Northern Kentucky University
- Top Recipients:** InfoBeyond Technology, Black-Philips
- Federal Funding:** \$50K in Contracts, \$1.85M in Grants and \$2.9M in SBIR/STTRs

Additional Activity

- 61% of the companies have less than 50 employees.
- Less than 10 job postings currently open, most from BnkToTheFuture, Deloitte and PwC, for blockchain and digital assets manager, IT/OT manager, investor and client support services, software QA analyst, and IT security architect.
- Salaries range: \$40K-\$150k a year.

Mississippi

The state is not very active in Web3.

University of Houston	<ul style="list-style-type: none">Grant - Develops a data-driven food charity ecosystem to address food insecurity and promote equitable nutrition.Grant - Disrupt illegal medical supply chains using network analysis, data mining, and intervention strategies.
VertiPrime Government Services	<ul style="list-style-type: none">SBIR P1 - Combine blockchain technology and artificial intelligence to address procurement challenges in the defense sector. By connecting a private distributed ledger with manufacturing codes and utilizing AI algorithms, we aim to accelerate the production of replacement parts for aging fighter jets and bombers.SBIR P2 - Develop the Odyssey procurement technology framework, combining AI, Blockchain, and IoT, to address supply chain issues in USAF sustainment efforts.

We analyzed U.S. Federal government investment into the DLT economy through contracts, grants, and technology commercialization funding (SBIR/STTR). This is relevant because, while much of this funding is to address government requirements, the technology developed is explicitly intended to drive innovation in the commercial sphere.

The Midwest

- [Illinois](#) has a thriving Web3 ecosystem, with initiatives across all five dimensions.
- [Indiana](#)'s Web3 economy is anchored by government and academic research.
- [Michigan](#) has several Auto industry incumbents that are driving Web3 activity.
- [Minnesota](#) has several Retail incumbents that are exploring diverse Web3 solutions.
- [Ohio](#) excels at attracting venture capital investment and research funding resulting in a healthy Web3 ecosystem.
- [Wisconsin](#) hosts a diverse Web3 economy.

For states that have more activity, additional detail on hiring and federal activity has been added on a second page.

Illinois

The state has a thriving Web3 ecosystem, with initiatives across all five dimensions.

Ecosystem

Investment

9 cos. with \$23M+ in Web3 investments.

- Top VC recipients:
- [CoinLedger](#) (founded: 2018) raised \$6M.
 - [yWhales](#) (2021) raised \$5M.
 - [Saile](#) (2018) raised \$0.2M.
 - [Lucid Ratings](#) (2019) raised \$0.17M.

Startups

- **25 startups** out of 27 companies.
- 36% of startups received at least 1 round of funding.
- 1 company was acquired.

Incumbents

21 Fortune 1000 companies headquartered, of which **6 companies** have significant Web3 investment or are implementing/developing Web3 technology:

Implementing/Developing

Investing

Government/Academia

- Focus Areas:**
- Empower undergraduates with research and training in cybersecurity, data analytics, and Web3.
 - Develop PrivacyGuard framework to protect sensitive data in cloud-based IoT systems using Web3.
 - Develop new theories and systems to address security challenges in Web3 technology, focusing on consensus protocols, network connectivity, and data truthfulness.

Funding Agencies: National Science Foundation

Active Universities: University of Missouri, Washington University, Saint Louis University

Federal Funding: \$970K in Grants

Additional Activity

- 89% of the companies have less than 50 employees.
- +50 job postings currently from several companies: Gigster, Deloitte, Recruiting From Scratch, Block, Truist, Mastercard, and PwC, among others. Most positions are for blockchain & software developer, blockchain & digital assets manager, senior art director, data architect, data scientist, among others.
- Salary range: \$80k-\$180k.

Montana

Despite its small population, Montana has some early-stage DLT activity in Bozeman.

The State of Web3: A state-by-state analysis of the Web3 economic activity in the U.S. (US-2023)

MOONBEAM

blockcoalition.org

Ecosystem

Investment

- The company [Blocky](#) (founded: 2018) based in **Bozeman** raised **\$1M**.
- The remaining companies don't have disclosed rounds of funding.

Startups

- 5 startups** out of 6 companies.
- 3 companies founded in 2017-2018 (Blocky, Foodshed.io, alphae)
- [The Moneyverse](#) is the most recent founded company in MT (2022).

Incumbents

Montana has zero Fortune 1000 companies based in the state.

Government/Academia

- Focus Areas:**
- Develop an ecosystem of tools to operate on shared application state stored on Distributed Ledger Technology, to provide a unified API much like that of leading cloud service providers.

Funding Agencies: National Science Foundation

Active Universities: Montana State University, University of Montana

Top Recipients: Blocky

Federal Funding: \$1.2M in SBIR/STTRs

Additional Activity

- 20 job postings from very few companies: Deloitte, Gigster, CCC, and Recruiting from Scratch.
- Some of the positions available are for blockchain and digital assets manager, sales development representative, product designer, blockchain engineers/developers, among others.
- Salary range: \$25K - \$130K.

Though a small number of startups, Nebraska has already seen one IPO in the Web3 space.

Ecosystem

Investment

7 cos. with **\$80M+** in Web3 investments (3 of these company are no longer in business).

- Top VC recipients:
- [Pinata](#) (founded: 2018) raised \$21.80M.
 - [PXLBRD](#) (2020) raised \$2M.

- **Omaha** is the center of investment activity.
- Over 53% of the companies are based in Omaha.

Startups

- **10 startups** out of 13 companies.
- 40% of startups received at least 1 round of funding.
- 1 company ([Exodus PINX: EXOD](#), based in Omaha) had an IPO.

Incumbents

7 Fortune 1000 companies headquartered, of which **2 companies** are implementing/developing Web3 technology:

Implementing/Developing

Government/Academia

- Focus Areas:**
- Explore security and privacy in mobile sensing and IoT systems through faculty-guided research.

Funding Agencies: National Science Foundation

Active Universities: University of Nebraska-Lincoln, University of Nebraska at Omaha

Federal Funding: \$127K in Grants

Additional Activity

- 70% of the companies have less than 50 employees, with over 60% of the companies were founded after 2015.
- +30 job postings currently from several companies: Deloitte, Gigster, Recruiting From Scratch, Goosmann Law Firm, Moody's, Xage Security, PayPal, among others. Most positions are for blockchain and software developer, blockchain attorney, compliance, data scientist, crypto security engineer, data engineer, among others.
- Salary range: \$80k-\$150k.

North Dakota

North Dakota has limited Web3 activity.

The State of Web3: A state-by-state analysis of the Web3 economic activity in the U.S. (US-2023)

Ecosystem

Investment

32 cos. with **\$300M+** in Web3 investments.

Top VC recipients:

- [Omnimodus](#) (founded: 2021) raised \$64.2M.
- [Doodles](#) (2021) raised \$54M.
- [Custodia](#) (2020) raised \$50.49M.
- [Irreverent Labs](#) (2021) raised \$45M.

- **Sheridan, Cheyenne** and **Casper** are the centers of investment activity.

Startups

- **88 startups** out of 99 companies.
- 36%+ of startups received at least 1 round of funding.

Company Distribution by Category

Incumbents

Wyoming has zero Fortune 1000 companies based in the state.

Government/Academia

No government activity through Contracts, SBIR/STTRs or Grants.

Active Universities: University of Wyoming

Additional Activity

- Very few job postings and most for remote positions. Some companies hiring include: Custodia Bank and SFOX.
- Some of the positions available are for Crypto attorney, Securities attorney and Bitcoin Software Engineer.
- Salary range: \$130K - \$170K.

Company Distribution by Year Founded

The West

- [Alaska](#) has limited Web3-related activity.
- [Arizona](#) hosts a growing Web3 community based around the Phoenix and Tucson.
- [California](#) unsurprisingly leads the nation in Web3 with 2000+ companies and 18 unicorns.
- [Hawaii](#)'s Web3 activity is limited to government applications.
- [Boise Idaho](#) leads the state with venture deals totaling \$6M+ invested, along with enterprise activity.
- [Nevada](#)'s gaming industry is leading interest in Web3 technology.
- [Oregon](#) has significant retail, aerospace, and advanced manufacturing-focused activity.
- [Washington](#) excels at enterprise applications of Web3 technologies with strong incumbents, diverse startups, and significant investment.

For states that have more activity, additional detail on hiring and federal activity has been added on a second page.

Alaska

To date, Alaska has not been very engaged with the Web3 economy.

The State of Web3: A state-by-state analysis of the Web3 economic activity in the U.S. (US-2023)

MOONBEAM

©2023 U.S. Blockchain Coalition. All rights reserved. This report, including its content, design, and intellectual property, is protected by copyright laws. For permissions and inquiries, please contact Arry Yu (arry@blockcoalition.org).

blockcoalition.org

Ecosystem

Investment

Alaska has a limited startup economy and, as such, garners little attention from investors. There are some efforts to increase angel investing in the state, but not specific to Web3.

To date, there have been no publicly disclosed venture capital investments in Web3 technologies or applications in Alaska based startups.

Startups

We were only able to identify one Web3 company, *BuyAnyCoin* founded in 2014, based in Anchorage. They had a campaign to raise \$10K via Indiegogo in 2015. As of 2023, they do not have an active website.

Incumbents

Alaska has zero Fortune 1000 companies based in the state. There are several sites for energy and other companies in Alaska, none of which that we could identify are investing locally in Web3.

There is a local airline, *Ravn*, which has begun using cryptocurrencies to issue airline miles.

Government/Academia

Alaska has no Web3 related government activity through contracts, SBIR/STTRs, or grants.

Active Universities: University of Alaska Fairbanks (individual academics and student groups)

Additional Activity

Alaskan government has sought to regulate blockchain activity in the state which may have cooled interest in the industry. Though, with the limited startup activity in the state, this may be unrelated.

There are few job postings, which are only for remote positions.

Arizona

The state hosts a growing Web3 community based around Phoenix and Tucson.

The State of Web3: A state-by-state analysis of the Web3 economic activity in the U.S. (US-2023)

Investing

Government/Academia

Focus Areas: Development of a Research Experiences for Undergraduates (REU) focused around blockchain technology

Funding Agencies: National Science Foundation

Active Universities: Boise State University, University of Idaho

Federal Funding: \$393K in Grants

Additional Activity

- Peak startup activity was in 2018 with 4 new companies founded.
- 15 job postings from very few companies: Deloitte, Gigster, Idaho State Job Bank, and Elastic.
- Some of the positions available are for digital assets manager, sales, tax, among others.
- Salary range: \$50K - \$150K.

Company Distribution by Year Founded

Nevada

The gaming industry is leading interest in Web3 technology in Nevada.

The State of Web3: A state-by-state analysis of the Web3 economic activity in the U.S. (US-2023)

Investment

32 cos. with **\$2.3B** in Web3 investments. Top VC recipients:

- [Figure \(Financial Software\)](#) (founded: 2018) raised \$400M+ (\$1.55B to date over all rounds)
- [Aleo](#) (2019) raised \$228M.
- [Prime Trust](#) (2016) raised \$201M.
- [Filament \(Connectivity Products\)](#) (2012) raised \$25.83M.

Total Funding by city

Startups

- **100 startups** out of 120+ companies.
- 3 unicorns, 4 companies received \$100M+
- 32%+ of startups received at least 1 round of funding.
- 2 companies had an IPO and 1 was acquired.

Company Distribution by Category

Incumbents

10 Fortune 1000 companies headquartered, of which **4 companies** are implementing/developing Web3 technology:

Government/Academia

No government activity through Contracts, SBIR/STTRs or Grants.

Active Universities: University of Nevada Reno, University of Nevada Las Vegas

Additional Activity

- 90 (76%) cos. between 1 and 50 employees
- 45 job postings from some companies: Deloitte, Gigster, Fortress, Blockchains, Kava Labs, and Recruiting from Scratch.
- Positions available include paralegal, customer relations, financial analyst, DevSecOps engineer, DB admin, sales, trader.
- Salary range: \$35K - \$160K.

Company Distribution by Year Founded

Oregon

The state has significant retail, aerospace, and advanced manufacturing-focused activity.

The State of Web3: A state-by-state analysis of the Web3 economic activity in the U.S. (US-2023)

We analyzed U.S. federal government investment into the Web3 economy through contracts, grants, and technology commercialization funding (e.g. highly competitive Small Business Innovation Research and Small Business Technology Transfer programs that encourage businesses to engage federal research needs with a focus on commercialization).

The State of Web3

National Trends in Web3

Since 2012, new startup activity in all Web3 sectors has a CAGR of 11.3% despite deep single-year declines in 2019 and 2022.

Web3 startups by founding year

Company Distribution by Category

Most companies created in the Web3 sector are dedicated to develop products and services applying Web3 technology. Still, there was a significant peak of companies in the cryptocurrency/bitcoin field in 2017 and a significant peak of companies in the NFT's tech in 2021.

U.S.-based Web3 companies have met major milestones for achieving unicorn status, IPOs, M&As and \$100M investment.

99 companies received more than \$100M USD in investment

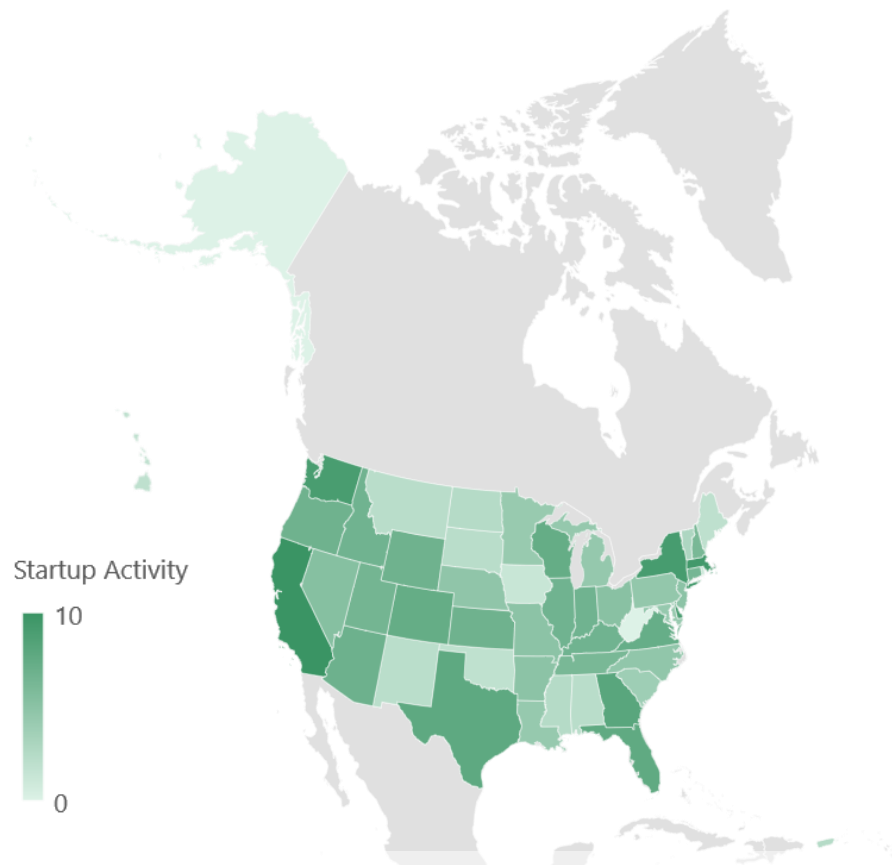

30 privately held startups valued in over \$1B USD (Unicorns*)

46 companies had an IPO

211 companies had an M&A

The Web3 industry in the U.S. witnessed impressive growth with 99 companies securing over \$100M USD in investment, 30 startups reaching unicorn status with valuations exceeding \$1B USD, 46 companies going public through IPOs, and 211 companies engaging in mergers and acquisitions.

Investment activity in the U.S. comes largely from U.S.-based investors, followed by the UK, China and South Korea.

Invested Capital by year

HQ Location of Investors

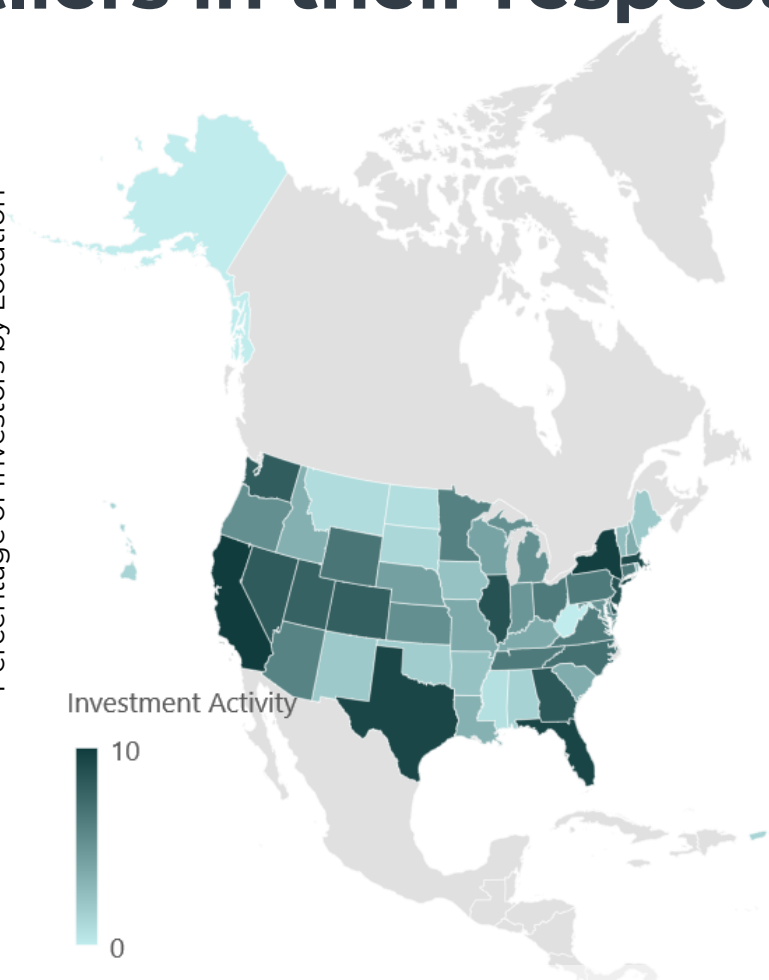

HQ Location of International Investors

Most investment is dedicated companies in the cryptocurrency/bitcoin, followed by companies developing promising enterprise use-cases. Some include **Smart Contracts, Non-tamper Certification for Supply Chains (Pharma, Ag, CPG, etc.), Personal health records, Cybersecurity solutions, and Big Data.**

Foreign investment varies widely from state to state with Texas and Nevada as outliers in their respective industries.

Vast majority of investment comes through Merger/Acquisitions and VC deals (early and later). Initial Coin Offering is starting to appear, but it is not common. While bigger states can attract significant international investment, smaller states, despite having notable companies, fare worse at attracting international investment.

Despite relatively low investment, NSF, DoD in overall investment, but HHS and DOE lead in average award size.

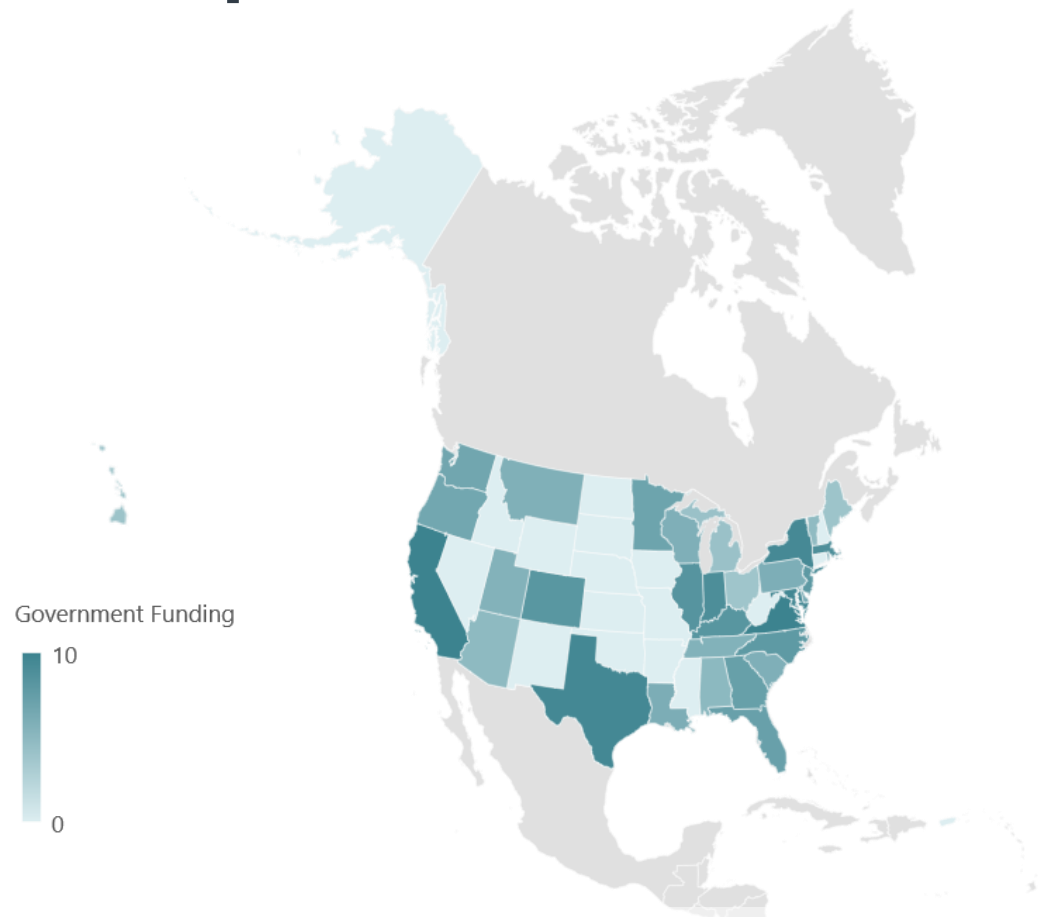

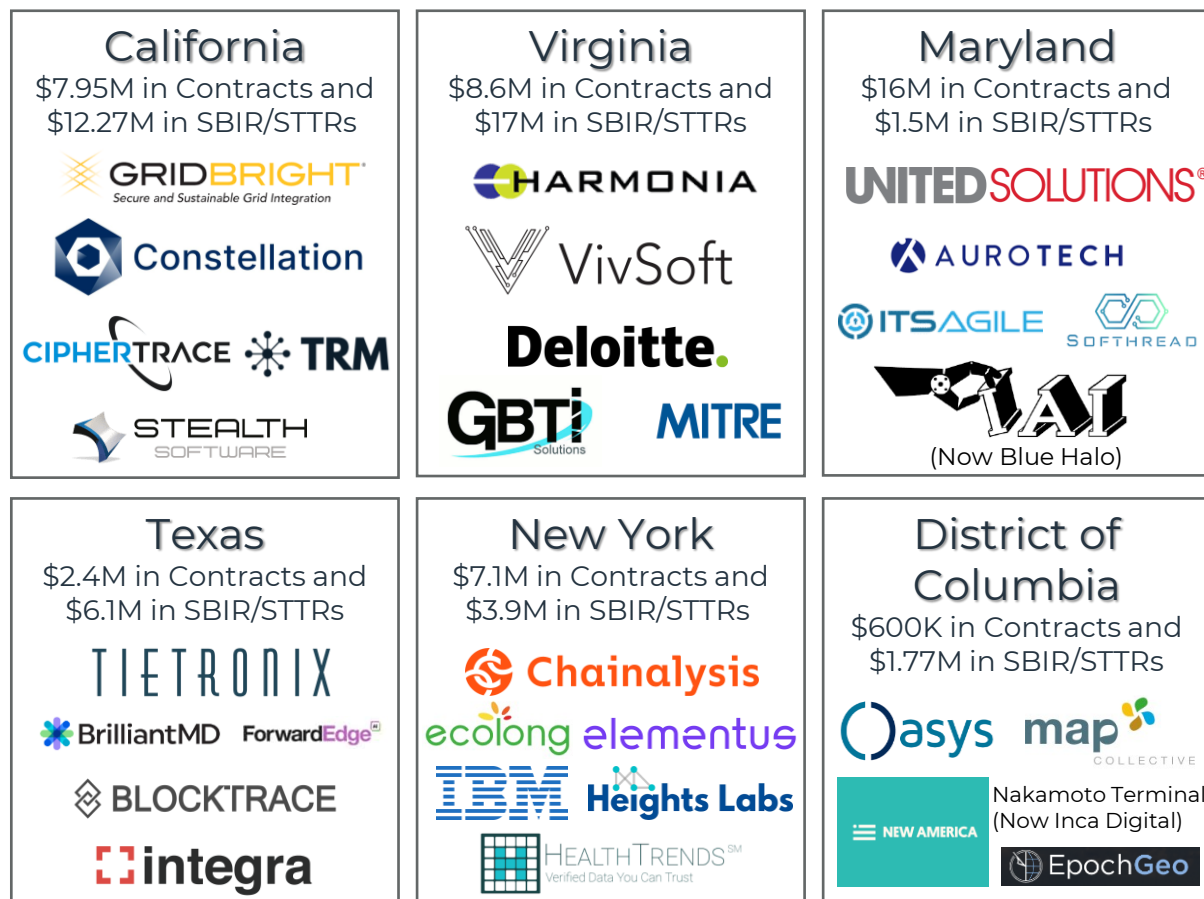

Agency	Number of Awards	Total Federal Action Obligation
National Science Foundation	168	\$58,381,172
Department of Defense	142	\$52,548,397
Department of Energy	39	\$21,950,528
Department of Health and Human Services	21	\$20,101,586
Department of the Treasury	20	\$15,944,961
Department of Justice	24	\$8,194,813
Department of Homeland Security	20	\$6,066,067
Department of Commerce	13	\$5,109,262
Securities and Exchange Commission	3	\$4,818,018
General Services Administration	2	\$2,997,497
National Aeronautics and Space Administration	11	\$2,633,065
Department of the Interior	1	\$2,355,079
Department of Agriculture	6	\$1,528,693
Department of Transportation	4	\$1,474,476
Department of State	9	\$1,154,185
Environmental Protection Agency	3	\$259,693
Institute of Museum and Library Services	1	\$100,000
Government Accountability Office	2	\$58,586
Consumer Financial Protection Bureau	1	\$24,900

Government interest has been growing in the past years, with a total of \$205M spent by several U.S. Agencies for the past 10 years. Funding was mainly focused on the **implementation of Web3** to its full potential, mainly in sectors like **Healthcare, Finance, Cybersecurity, and Energy**, while cryptocurrency is being actively tracked from the regulation/control point-of-view. Meanwhile, significant efforts are being implemented to tackle workforce scarcity through college-level training.

Small companies and incumbents alike are partnering with the government to research and develop Web3 solutions.

Since Web3 can still be considered an emerging field, most federal funding is dedicated to **R&D**. However, some mature companies are already providing **products and services** to the U.S. government.

Academic activity also comes through federal grants and high-impact R&D

California
\$5.37M USD in Federal Grants and High Impact R&D

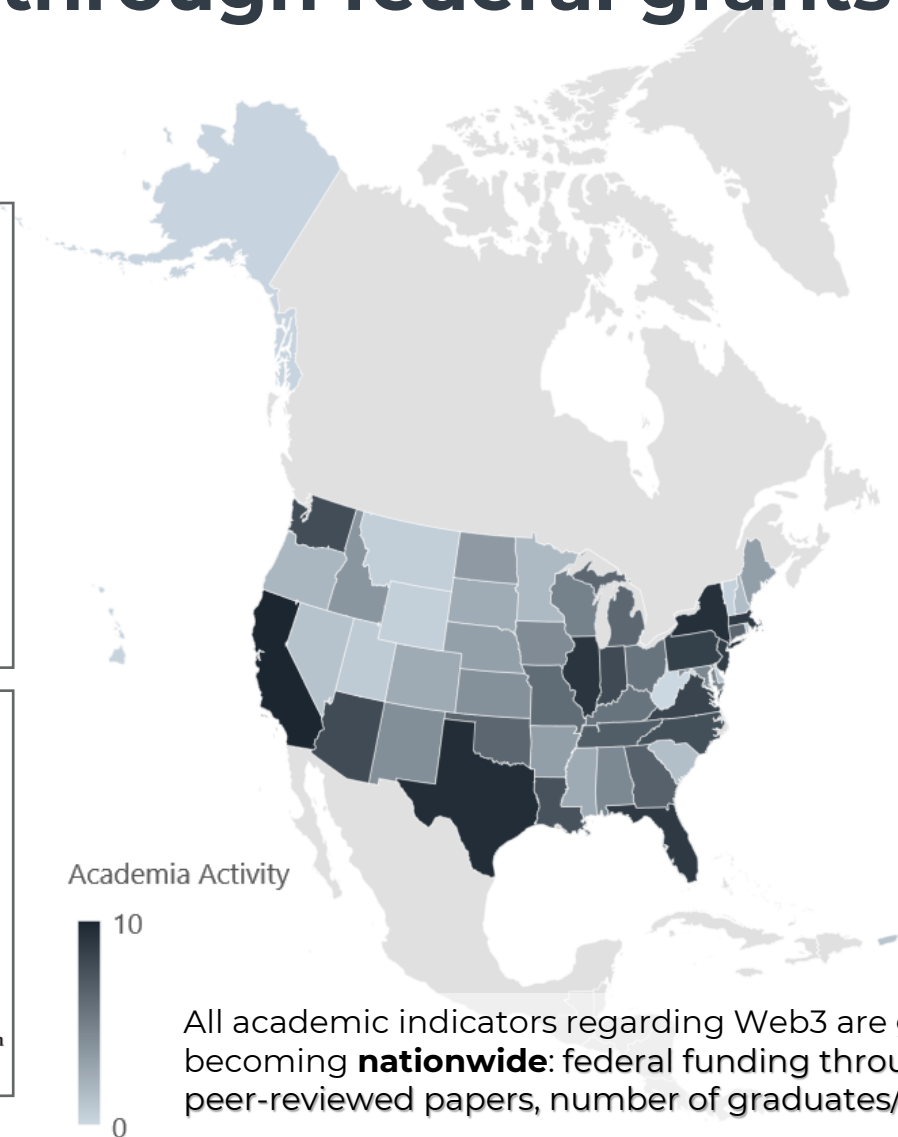

Texas
\$6.63M USD in Federal Grants and High Impact R&D

New York
\$3.3M USD in Federal Grants and High Impact R&D

Illinois
\$4.2M USD in Federal Grants and High Impact R&D

Florida
\$3.47M USD in Federal Grants and High Impact R&D

Massachusetts
\$2.89M USD in Federal Grants and High Impact R&D

All academic indicators regarding Web3 are **growing** and becoming **nationwide**: federal funding through grants, number of peer-reviewed papers, number of graduates/courses, among others.

Honorable Mentions
Impactful R&D and expanding curriculum

The State of Web3

Methodology and Terms Defined

Methodology Overview

Overview

This report seeks to provide an extensive assessment of the economic activity, impact, and innovation potential of Web3 technology across the 50 U.S. States, the District of Colombia, and Puerto Rico (50+2).

It aims to identify the strengths and opportunities of each state's Web3 ecosystem across the 5 dimensions. The report also seeks to highlight best practices and opportunities for collaboration within and across states to foster a thriving Web3 ecosystem that can drive economic growth, create jobs, and improve the lives of citizens.

Ultimately, the goal of the report is to provide policymakers, investors, entrepreneurs, and researchers with actionable insights that can inform their decisions and contribute to the continued development and adoption of Web3 in the United States.

To achieve this, Moonbeam analyzed economic activity across five primary dimensions: (1) Startup activity (2) Incumbent activity (3) Investor activity (4) University research and (5) Government funding.

This methodology was informed by:

- Daniel Isenberg's "Domains of the Entrepreneurship Ecosystem" model ([link](#)),
- "Innovation Ecosystems" by Thomas & Autio ([link](#)),
- MIT Sloan Heat Map (Strategically Engaging with Innovation Ecosystems) ([link](#)).

Web3 Defined

To support this analysis, we targeted several key technology areas related to the advancement of the Web3 technologies and industry. We built a term adjacency map to connected concepts centralizing around:

- Blockchain
- Distributed Ledger
- Web3
- NFT/NFT Technology/Non-Fungible Tokens
- Decentralized Finance/ deFi
- Decentralized Autonomous Organization
- Crypto
- Cryptocurrency / Bitcoin
- Digital Asset/Digital Asset Management
- Verifiable Credentials
- Decentralized Identity
- Stablecoins
- Self-Sovereign Identity
- Token
- Tokenomics
- Tokenmetrics
- Crypto Assets

The State of Web3: A state-by-state analysis of the Web3 economic activity in the U.S. (US-2023)

Partners

Blockchain Ecosystem Benchmarking

Moonbeam analyzed economic activity across the five primary dimensions.

1. Startup activity
2. Incumbent activity
3. Investor activity
4. University research and
5. Government funding.

After data was collected, cleaned, and normalized, each feature was ranked individually, and all features within a category were averaged to get a single value between 0 (low) and 10 (high). Moonbeam performed a median of all values within a category to generate an average state, to which all states were compared.

A minimum value of 0.2 (instead of zero) was given to the lowest rank, to account for other sources of data not evaluated in this report (e.g. other incumbents outside the Fortune1000 list, government policies, masters and specific courses focusing on blockchain in Academia).

Sample Ecosystem Benchmark

Key Indicators

We evaluated economic indicators across the following activity areas:

Startup Activity <ul style="list-style-type: none">• Number of companies• % of startups with investment	Investment Activity <ul style="list-style-type: none">• Total Number of Investors• Total Amount Invested	Government Activity <ul style="list-style-type: none">• Total Number of Contracts and SBIR/STTRs• Total Awarded Amount	Academia Activity <ul style="list-style-type: none">• Total Number of Grants• Total Awarded Amount• Number of scientific papers	Incumbents <ul style="list-style-type: none">• Total number of incumbents• % of incumbents developing or implementing BAT• % of incumbents investing
---	--	--	--	---

Methodology

Data Collection & Analysis

Moonbeam evaluated Web3 related activity across the 50+2 jurisdiction across five major activity categories. Here are some examples of what each dimension measured:

- **Startup** – Total number of startups, amount and type of funding received, year of foundation, number of employees, business status, company category (the same company can be in several categories), number of startups with a valuation of over one billion USD.
- **Investors** – Number and origin of investors, number of investments, stage of deals, deal success as measured by exits and acquisitions, total capital invested and top funding recipients per state.
- **Incumbents** – Limited to incumbents of Fortune 1000 companies by doing a board search for press releases and news pieces detailing examples of developing/implementing Web3 or collaborating with other companies to implement/develop Web3. Other inputs included finding any history of investing in Web3-related companies and, whenever possible, if currently (or were in the past) hiring for Web3-related jobs.
- **Academia** – Grant and R&D funding activity related to Web3. Google Scholar was used to evaluate the scientific output via published papers in peer-reviewed scientific magazines and repositories, for several universities and research institutes nationwide.
- **Government** – Primary focused on government funded research through contracts, grants and technology commercialization activities through the Small Business Innovative Research (SBIR)/Small Business Technology Transfer (STTR) program.

Additionally, we also checked job postings using several online sources, detailing number, positions, companies, and estimated annual salary ranges, whenever possible.

Our data sources cover a wide range of innovation indicators, including company formation, patent activity, venture capital investment, government contracts and grants, job opening, incubator/accelerator classes, expert interviews, corporate demand signals, commercialization funding, and conference proceedings, government contracts, government research budgets, corporate demand signals, corporate spending, university research, university commercialization activities, expert analysis, and job postings and other job activity.

The State of Web3: A state-by-state analysis of the Web3 economic activity in the U.S. (US-2023)

MOONBEAM

blockcoalition.org

Methodology

Approach, Assumptions, and Limitations

When working with data related to economic activity across the five previously mentioned primary dimensions, it is necessary to make certain assumptions during the data cleaning and processing stages as we normalized the data for the study.

It is essential to ensure that the assumptions are transparent and labeled, particularly if there is a desire to transform the analysis into a real-time or recurrent analysis, as definitions, parameters, and categorizations may change in the world, needing corresponding adjustments in our analysis to maintain its accuracy and statistical reliability.

It is important to note that the databases on the Moonbeam platform are regularly updated, resulting in potential changes to the obtained results with each subsequent search. While this is a factor to consider, it does not significantly impact the performance of the analysis, as the focus is predominantly on historical data from 2007 up until the conclusion of 2022. Job postings data is a snapshot of what was posted online (Indeed, LinkedIn, Google Jobs) during the April/May 2023 timeframe.

Within the data science process, the first step involves the cleaning and transformation of variables, which can encompass handling unknown/null values, removing duplicates, correcting erroneous data inputs, and creating new variables, among other actions. Following this step, descriptive analysis is undertaken, wherein the data is filtered and grouped to gain an understanding of each variable behavior.

According to this methodology, California, with its four major metropolitan areas and exemplar universities rates very high. Meanwhile, smaller (by population) states like Alaska and Wyoming have less activity. Where possible, we tried to highlight activity in each state, but took care to not over represent activity in smaller states because we had more space to fill. As such, for states like California, Texas, Washington, etc. we have included an additional page of information.

blockcoalition.org

Terms and Definitions used in this Report (pg. 1 of 2)

Term	Definition
Bitcoin	The most well-known cryptocurrency, based on the proof-of-work blockchain. Bitcoin was created in 2009 by an unknown creator, Satoshi Nakamoto, and its technology was outlined in a whitepaper titled, “Bitcoin: A Peer-to-Peer Electronic Cash System”. Bitcoin established the first decentralized digital asset and uses blockchain technology to create a digital asset that is entirely decentralized and managed across a wide network of computers (nodes) rather than by a single centralized entity.
Blockchain	Type of distributed ledger, composed of unchangeable (immutable), digitally recorded and validated data in chronologically ordered packages called blocks, managed by a cluster of computers, not owned by any single entity. Each block is then ‘chained’ to the next block, using a cryptographic signature, creating a long chain. The nature of the cryptographic tie from one block to previous blocks means that previous blocks cannot be altered by anyone. This allows block chains to be used like a ledger, which can be shared and accessed by anyone.
Distributed Ledger	Larger class of technology which includes blockchain, where transactions are recorded in multiple copies without central authority or data storage, whether they are permissioned or unpermissioned.
Web3	In the context of Ethereum, refers to the decentralized apps that run on the blockchain. These are apps that allow anyone to participate without monetising their personal data. Some limitations include scalability (decentralization slows down transactions), user experience (it takes a lot of extra steps/software to interact with it), accessibility (it’s not yet integrated in modern web browsers), and the cost (it’s expensive to put anything on the blockchain). Benefits, mainly due to decentralization, include: Anyone on the network has permission to use the service. Service is permissionless. No one can block you or deny you access to the service. Payments are built in via ether (ETH). Ethereum is turing-complete, which means that anything can be programmed on it.
Non-Fungible Token (NFT)	Special type of cryptographic token that is a representation of a unique digital asset that is not interchangeable. This is in contrast to cryptocurrencies like Bitcoin, and many network or utility tokens that are fungible in nature. A non-fungible token is a digital certificate of authenticity used to assign and verify ownership of a unique digital or physical asset. Unlike fungible tokens, NFTs are not interchangeable with one another.
Decentralized Finance (DeFi)	Financial decentralized applications (dApps) and tools built on the blockchain. Short for “decentralized finance,” an umbrella term for a variety of financial applications geared toward disrupting financial intermediaries.
Decentralized Identifier (DID)	Type of identifier that enables verifiable, decentralized digital identity. A DID refers to any subject (e.g., a person, organization, thing, data model, abstract entity, etc.) as determined by the controller of the DID. In contrast to typical, federated identifiers, DIDs have been designed so that they may be decoupled from centralized registries, identity providers, and certificate authorities. Specifically, while other parties might be used to help enable the discovery, or verification of information related to a DID, the design enables the controller of a DID to prove control over it without requiring permission from any other party. DIDs are URIs that associate a DID subject with a DID document allowing trustable interactions associated with that subject.

Terms and Definitions used in this Report (pg. 2 of 2)

Term	Definition
Decentralized Autonomous Organization (DAO)	A DAO in general is a governance structure that contains a set of predefined rules in a smart contract to review “good behavior” and penalize “bad behavior”. Generally, DAOs can be thought of as corporations that run without any human intervention and surrender all forms of control to an incorruptible set of business rules. Also called a DAC - a Decentralized Autonomous Corporation.
Token	Can have different definitions depending on the context: <ul style="list-style-type: none">• A security token is a token that represents a share of the company.• A stable token is a token that has a relative fixed value in relation to another currency.• A utility token is a token with a utility besides value.
Tokenomics	Tokens + economics and is the token structure, management and distribution.
Tokenmetrics	Tokenmetrics refers to the analysis and evaluation of various metrics or factors related to a cryptocurrency or token. It involves assessing quantitative and qualitative data to gain insights into the potential performance and value of a token.
Crypto Assets	Crypto assets, also known as cryptocurrencies or digital assets, are digital or virtual forms of money or value that use cryptography for secure transactions and to control the creation of new units.
Stablecoin	Type of cryptocurrency that’s backed by a stable asset such a gold or traditional fiat currency, known as pegging. Blockchain is also being used to digitize other assets, such as cars, real estate and even artwork. Stablecoin is any cryptocurrency pegged to a stable asset, like fiat or gold. It theoretically remains stable in price as it is measured against a known amount of assets not subject to change. A token with its value pegged to another asset. Stablecoins are usually backed by a fiat currency, like the U.S. dollar. It can also be pegged to physical assets like precious metals, or even other cryptocurrencies like bitcoin.
Self-Sovereign Identity (SSI)	Identity that is owned only by the user, typically built on a decentralized system that doesn’t involve any third-party.
Decentralized Identity	Decentralized Identity (DID) refers to a digital identity management system that provides individuals with control over their personal data and identity information without relying on a central authority. It is based on the principles of self-sovereign identity, where individuals have ownership and control over their own identity and can selectively share personal information as needed.

CEO

- 19+ years consulting, 10+ years in corporate innovation
- Deep expertise in emerging technology for enterprises
- Degrees in Math and Computer Science

Raquel Jacinto, PhD
Sr. Data Scientist

- 10+ years data analysis.
- Degrees in Developmental Biology and Data Science.
- Developed over 40 reports on technologies, including Quantum, Autonomous Vehicles and LiDAR, HealthTech, LegalTech, and Robotics.

Filipa Matos, MS
Data Scientist

- 4+ years data analysis.
- Degree in Electrical and Computer Engineering with specialization in Data Science.
- Developed over 10 reports on several technologies, including Clinical Data Processing and Aerospace.

MOONBEAM

Moonbeam Exchange, LLC, who produced this report, has no connection or affiliation with Moonbeam Network or the Moonbeam Network Platform.

The Moonbeam platform brings together over 100 data sources, tracking innovation indices such as startup activity, venture investment, government research funding, job postings, etc. Additionally, we incorporate data and analysis from trusted authorities on the innovation economy like Pitchbook and Crunchbase.

The State of Web3: A state-by-state analysis of the Web3 economic activity in the U.S. (US-2023)

About the U.S. Blockchain Coalition

The U.S. Blockchain Coalition is a coalition of state blockchain associations across the country cooperating to ensure the United States is a leader in blockchain, Web3, and distributed ledger technologies (DLT).

We do this by:

- **Aligning and collaborating** on public policy and legislative priorities.
- **Finding opportunities** to partner on projects that enhance the competitiveness of the U.S., different regions, and individual states.
- **Sharing** best practices for economic development and building strong, supportive regulatory environments.
- **Highlighting and cataloging** use cases across the country.
- **Providing** accessible education to policymakers.
- **Building** relationships with regulatory bodies and agencies.
- **Proactively seeking out** new partnerships with industry, government, academia, and investors to meaningfully grow the sector across the country.

USBC members and partners are working together to break down the fragmentation and silos to establish a strong baseline of a credible data-informed proactive strategy to build future legislation in a way that supports a flourishing blockchain, DLT, and digital asset industry.

We support startups and companies by creating a more coherent environment to operate in, state by state.
